

## FORMULA 161 CARPET SHAMPOO

FOR PROFESSIONAL USE ONLY

A "Woolsafe" Soil Retardant Carpet Shampoo with Biosolv. The best quality shampoo designed for rotary extraction (Chemstractor SC) or foam carpet cleaning equipment.

### Hints and Tips

- **Special soil retardants added to help keep dirt from sticking to fibres**

The special formulation helps keep dry soil from attaching to fibres and thus allowing easy removal during normal vacuuming. The result is a cleaner looking carpet for longer periods of time.

- **Any shampoo residue dries crisp and completely crystallises.**

Unlike "normal" carpet shampoos. Chemspec's Formula 161 Soil Retardant Shampoo is formulated so that any residue will dry crisp completely – not remain sticky or tacky – for easy removal during the first vacuuming. Residues no longer linger and cause build up or leave harmful residues. Carpet appearance remains cleaner for much longer.

### **Carpets Wear longer**

Due to the soil retarding capabilities found by using Chemspec Formula 161 there is less carpet fibre abrasion and wear giving extra life to the carpet.

### **Buffered pH for optimum cleaning efficiency.**

Formula 161 retains maximum cleaning efficiency at use dilutions through the addition of formulated buffers. The optimum efficient pH of 9.0 to 9.5 is retained for safe dependable deep cleaning.

### Directions

For rotary or rotary extraction (Chemstractor SC cleaning)

- If dry soil retardants are required with high quality carpet shampoo. Mix 250ml to each 4 litres of warm water (16 to 1 dilution)
- If a high quality carpet shampoo with reduced dry soil retardants is desired, mix 200ml to each 4 litres of warm water ( 22 to 1)
- For foam generating carpet cleaning machines, mix 300mls of Formula 161 with each 4L of warm water.

### Additional Chemspec Helpful Hints

1. Thoroughly vacuum entire carpet before cleaning.
2. Place waterproof cover under machine when filling tank over carpeted areas.
3. Use a hand brush to clean corners or areas where the machine cannot reach.
4. Clean carpet in metre passes when using a rotary machine/ foam generators use a straight line and overlap each pass.
5. Use a pile brush to reset pile in one direction after cleaning before the pile dries.
6. Use foil or plastic protectors under all furniture that will touch wet carpet.

### Formula 161 Characteristics

pH Value: 9.2 – 9.8  
Coverage: Variable to use and application.  
Dilution: Variable see label or above.  
Appearance: Clear Yellow Liquid  
Fragrance: Citrus Ammonia  
Packaging: Single 3.78L or case of 4  
Re-order Code: Single: F16111G  
Case: F1614G

PRE-TEST ALL AREAS TO BE TREATED.
