

Diversey Care Combines Detergent and Rinse Aid in One Product to Simplify Professional Machine Dishwashing

Easy-to-use Suma Combi+ eliminates need for separate detergents and rinse aids

Suma Combi+ is a new machine dishwashing detergent from Sealed Air's Diversey Care business with built-in rinse aid that cleans, rinses and dries kitchen ware efficiently and effectively. Because a separate rinse aid is not needed, Suma Combi+ simplifies the dishwashing process, saves space in the kitchen and reduces packaging waste.

Most facilities with industrial dishwashers still use separate auto-dosed detergents and rinse aids. Suma Combi simplifies the process so that food service organisations can achieve the consistent cleaning results to which they are accustomed but with a single, convenient, combined product.

Suma Combi increases efficiency because dishwashers do not have to measure rinse aid separately. Because separate rinse aid is no longer necessary, Suma Combi+ also eliminates the risk of running out of the essential drying agent and ensures users have better visibility and control over costs.

With simplified packaging, Suma Combi+ is easier to handle than multiple products and allows facilities to store and manage fewer chemicals. The product also reduces packaging waste to support improved sustainability in food service operations.

"Suma Combi+ allows facilities to get kitchen ware clean, sparkling and dry, all for the same, manageable annual cost of purchasing separate detergent and rinse aid," says Lindsay Childerhouse, Care Portfolio Manager for Diversey Care in UK and Ireland. "With this easier-to-handle, all-in-one product, operations can provide the spotless glassware, dishes and silverware their guests demand."

The product is available in 5 litres and 10 litre 'Safepack' versions, and there is also an Aluminium Safe version
