# Why choose Remondis UK for your vehicle and automotive waste?

**A one-stop-shop for all automotive industry waste: paints, rags, plastics, metals, filtercakes, oil sludges, oils and food waste.**

With UK car production at a seven-year high, record vehicle registration figures and a booming used car marketplace, the automotive sector is on a high. But with all of this production, comes an increase in the waste being produced.

Once the vehicle is out of the door, there is an obligation on manufacturers, suppliers, mechanics and technicians throughout the supply chain to ensure their facilities keep up with both environmental and safety standards.

That is why it is important to partner with someone you can trust. Working with sites throughout Europe, we are able to offer an automotive waste one-stop-shop to sort materials and channel them to the best recovery or recycling process.

Our highly trained team will work with you to find custom-made approaches to meet your specific requirements. This includes taking waste in all forms, from skips to drums and IBCs. We can even take catering food waste.

With a nationwide, flexible, 24/7 service, you can trust us to ensure that all waste is handled appropriately, with required compliance, destruction and certification paperwork supplied for your records.

All waste is collected and processed through our ultra-modern, state-of-the-art waste transfer and recycling facility in Merseyside. Built to the highest standards, the Carr Lane site is able to process up to 69,000 tonnes of material each year within a safe, secure and fully-contained 24/7 environment.

## > Our specialist services include:

Recycling of hazardous waste and metal contaminants through our Europe-wide network of facilities

Management of plastic and metal recovery, including complex polymers and precious metals

Handling specialist wastes, including oils, oily sludges, filtercakes, paints and rags

Total waste solutions, including catering food waste

Complete control of your waste requirements, from collection through to recycling, reprocessing, recovery and disposal
