

Battery Power Ensures Compact Floorcare Autonomy ***TASKI swingo 150B and 350B ideal for smaller areas***

The TASKI swingo 150B and 350B scrubber driers from Diversey are high-performance battery-powered machines that are ideal for cleaning small floors quickly and efficiently without the restriction and potential hazards of a mains cable. They are particularly suitable for opportunity and daytime cleaning in shops, restaurants, washrooms, hotels, care homes, offices and schools where the autonomy allows them to be used whenever and wherever required with optimum safety.

The machines high-efficiency powerful Lithium-Ion battery provides enough power for 20 minutes of continuous cleaning. It can be replaced quickly with a fully-charged unit whenever needed to support ongoing cleaning or fully recharged in-situ in just 90 minutes. The battery also supports short-period opportunity or top-up charging during breaks or when the user is completing other tasks. In the majority of applications this ensures the machines are effectively available whenever needed.

They are the smallest battery powered machines in the extensive TASKI range. Their introduction means that Diversey now offers battery-powered machines of all sizes so that operators can specify their machine fleets with complete flexibility. With no need for access to mains power sockets, battery powered machines can be used in any part of a building without limitations. The absence of a power cable also eliminates a potential trip hazard from the working area.

The machines incorporate the superior cleaning features and benefits of the existing mains-powered versions that have proved so successful. Like other TASKI scrubber driers they deliver the highest possible cleaning and hygiene performance and promote safety by removing up to 99 per cent of the water and cleaning solution from the floor so that busy areas can be used immediately with reduced risk of slip-fall accidents.
